

# **Multi** Biodegradable Products

A complete range of **biodegradable products** now available.

The demand for biodegradable products is getting larger as waste management takes more effort on a world wide scale. For years Benfried has been working with premium manufacturers to come to biodegradable products as used in modern horticulture. **A full program is now available!**

#### **Biodegradable string**

Being used for various purposes, but mostly as crop support, string or horticultural twine, makes up for a significant part of the required needs in horticulture. After extensive research and testing biodegradable string is now available as Biotwine 600 and Biotwine 800.

#### **Biodegradable clips**

Clips used in tomato and some other vegetable crops have been a waste issue for quite some time. Biodegradable clips made with organic raw materials, such as corn or potato based products, are on the market for some time, but only now available in sufficient quantities and sizes.

#### **Biodegradable pots**

In ever more countries the use of plastic pots or other packaging materials for flowers and plants are being restricted. The availability of biodegradable pots in various shapes and sizes have risen. Benfried has made a collection of these products for various purposes, such as bedding plants, potted plants and/or perennials.

**Ask for the latest available biodegradable products with Benfried and gain efficiency and costs reduction in your waste management.**
